

INFOTECH

Complete Platform Blueprint — v3

Website & Design System · Admin Dashboard, HR & Payroll · APIs & Database · Figma
Wireframe Spec · Extended Implementation Requirements

"Infotech is not just a service provider — it's your digital growth partner."

Purpose

A consolidated functional, visual, technical, and handoff specification for the Infotech public website and internal management platform. This v3 retains the v2 requirements and adds the remaining implementation details identified during review.

Source basis: Infotech — Complete Platform Blueprint v2, supplied by the user. The additions in this v3 are explicitly marked as extended implementation requirements.

DOCUMENT CONTENTS

Part	Contents
A	Website Script & UI Specification
B	Design System
C	Admin Dashboard System
D	API Requirements
E	Database Schema
F	Figma Wireframe Specification
G	Extended Implementation Requirements
H	Implementation Checklist & Handoff

Version note

v3 preserves the v2 structure and requirements and adds: Employee Profile, Intern Performance, Career Application Workflow, Document/File Management, API Response Standards, Database Relationships/ER guidance, and a consolidated implementation checklist.

PART A — WEBSITE SCRIPT & UI SPECIFICATION

1. Navbar

Zone	Content
Left	Infotech logo
Center	Home · Solutions · Case Studies · Careers · Blog
Right	Login · Get Started button

Behavior

- Sticky navbar on scroll.
- Glass/blur background effect once scrolled.
- Responsive hamburger menu on tablet/mobile.
- Smooth-scroll navigation to in-page sections.

2. Hero Section (High-Conversion)

Headline: Build Smarter. Scale Faster. Grow with Infotech.

Subtext: We help businesses transform digitally with AI-powered solutions, modern development, and growth-focused strategies.

CTA Buttons: Start Your Project | Get Free Consultation

UI & Motion

- Full-screen (100vh), responsive 2-column layout.
- Dark animated gradient background with subtle glow effects.
- Floating AI / code / chart elements drifting in the background.
- Animated dashboard illustration on the right column.
- Live counters below the CTAs (Projects, Clients, Growth %).
- Smooth entrance animations (fade + slide up) on load, powered by Framer Motion.

3. Trust & Credibility Bar

"Trusted by startups, brands, and growing businesses"

- Auto-scrolling client logo slider.
- Star ratings display.
- Stats: 100+ Projects Delivered · 50+ Happy Clients · 5+ Years Experience.

4. Solutions

Title: "Smart Solutions for Modern Businesses"

Solution	Description
Web & Platform Development	Fast, responsive, and scalable websites & web apps.

Solution	Description
AI & Automation Systems	Chatbots, CRM automation, workflow tools.
Growth Marketing	SEO, paid ads, funnel optimization, analytics.
Custom Software	Tailor-made dashboards, CRM, ERP systems.

Card Interaction

- Icon + Title + Description per card, 2x2 grid on desktop.
- Hover lift with soft shadow.
- Gradient glow on hover.
- "Learn more" CTA interaction.

5. Why Infotech

- Fast Delivery with Agile Process
- AI-Driven Development
- ROI-Focused Execution
- Secure & Scalable Architecture
- Dedicated Support Team

Layout: split section — bullet list with icons on the left, supporting illustration on the right.

6. Case Studies (Trend Feature)

Case Study	Result
E-commerce Platform	+250% Traffic, +120% Sales
Startup Launch	0 → 10K Users in 90 Days
Business Automation	Reduced manual work by 70%

Card & Slider Behavior

- Horizontal slider, 3 cards visible on desktop.
- Each card: project image, title, growth metrics, "View Case Study" button.
- Image zoom-in on hover with overlay animation.
- Mobile: horizontal scroll/swipe.

7. Interactive Tools

ROI Calculator

- Inputs: Investment amount, Expected revenue, Conversion rate.
- Output: Estimated ROI, results display panel.

Website Speed / Audit Checker

- Input: Website URL.
- Outputs: Speed/performance score, basic SEO check, mobile performance score.
- CTA to contact Infotech with the results.

AI Chat Assistant

- Chat popup/modal launcher.
- User question → AI response flow.
- Lead-capture prompt inside the chat.

8. Careers & Internship Hub

"Learn. Build. Grow with Infotech."

Internship Cards

- Role
- Duration
- Required skills
- Location / Remote
- Short description
- Apply Now button

Training Tracks

- Developer Internship
- Digital Marketing Training
- Real Project Experience
- Certification Programs

9. Testimonials

- Slider layout: profile image, name, feedback text.
- Video reviews.
- Client feedback cards.
- Success stories.

10. Smart Enquiry Funnel

- Step 1: Select Service
- Step 2: Enter Details
- Step 3: Choose Budget
- Step 4: Submit

Fields: Name · Phone · Email · Business Type · Budget Range · Project Requirement

Auto Response: "Thank you! Our team will contact you within 24 hours."

11. Blog & Insights

- Tech blogs
- Marketing strategies
- AI trends
- Business growth tips

Layout: 3-column grid — image, title, short excerpt per card.

12. Footer

- Quick Links: Services, Careers, Contact.
- Social Media Icons.
- Floating: WhatsApp Button + Live Chat.

"Infotech should look like a product, not just a company."

PART B — DESIGN SYSTEM

The visual language for the entire platform: a premium, dark SaaS aesthetic with glassmorphism, gradients, and smooth motion — used consistently across the public site and the admin dashboard.

1. Color Palette

Token	Value	Usage
Primary / Dark Navy	#0B0F19	Primary dark surfaces and navigation
Accent / Electric Blue	#5B8CFF	Primary actions, highlights, links
Secondary / Teal	#00D1B2	Secondary accents and success-oriented UI
White	#FFFFFF	Primary surface text on dark backgrounds
Secondary Text	#A0AEC0	Muted/secondary text on dark backgrounds
Background	Dark → Blue gradient	Navy #0B0F19 fading to deep blue

2. Typography

Role	Font
Headings	Inter Bold / Satoshi Bold
Body	Inter Regular
Scale	H1 48px · H2 36px · Body 16px

3. UI Style

- Glassmorphism cards (translucent background, blur, thin border).
- 12–16px border radius on cards, buttons, and inputs.
- Soft, diffused shadows — avoid hard drop-shadows.
- Gradient glow effects behind key visuals (hero, CTAs, illustrations).
- Smooth hover animations on all interactive elements.
- Framer Motion for entrance, hover, and page-transition animation.
- Overall feel: premium SaaS product interface, not a static brochure site.

4. Design Inspiration

Reference	What to borrow
Stripe	Clean, premium, confident use of whitespace and gradients
Vercel	Dark, minimal, high-contrast typography-led layouts
Webflow	Modern, creative motion and card interactions

Infotech should feel like a SaaS product + premium digital agency — not a traditional corporate website.

PART C — ADMIN DASHBOARD SYSTEM

Complete specification for the internal system: HR, Internship management, Attendance & Leave, Payroll, CRM, Automation, CMS, Projects, Analytics, Notifications, and Security.

1. Overview

Infotech Admin Dashboard is a SaaS-style management system combining CRM, HR management, employee tracking, internship monitoring, attendance automation, leave management, project tracking, and payroll processing.

2. Core Modules

- Dashboard Analytics
- Employee Management System (HR)
- Internship Management System
- Attendance & Leave Management
- Payroll System
- Lead CRM System
- Automation Module
- Content Management (CMS)
- Projects Module
- Reports & Analytics
- Notifications
- Security & Audit Logs
- Settings & Role Management

3. Roles & Permission Matrix

Every user logs in through a role-based portal. The matrix below defines exactly what each role can see and do.

Module	Admin	Manager	Finance	Employee	Intern
Dashboard	Full	Team	Finance	Personal	Personal
Leads	Full	Team	No	No	No
Employees	Full	Team	View	Own	Own
Attendance	Full	Team	View	Own	Own
Internship Reports	Full	Team/Interns	No	No	Own
Payroll	Full	View	Full	Own Payslip	No
Projects	Full	Team	View	Assigned	Assigned
CMS	Full	No	No	No	No
Settings	Full	No	Limited	No	No

4. Employee Management System (HR Module)

Central registry for every person in the organization — employees and interns alike.

- Add / Edit / Deactivate employee & intern profiles.
- Fields: Name, Photo, Role, Department, Employee/Intern ID, Joining Date, Reporting Manager.
- Document storage: ID proof, contract, offer letter.
- Department & designation management.
- Login credential creation and password reset.

5. Intern Dashboard & Daily Report Workflow

Interns get a dedicated login where they check in/out and submit a Daily Report. Admin reviews every report and can add comments or feedback, visible back to the intern.

Intern Dashboard — Top Cards

- Today's Attendance status
- Check-In Time
- Check-Out Time
- Today's Working Hours

Daily Report Form

- Date
- Tasks Completed
- Hours Spent
- Blockers / Issues Faced
- Key Learnings
- Attachments (optional)
- Submit Report

Admin Feedback (shown back to intern)

- Admin comment
- Review status (Reviewed / Pending)
- Weekly performance rating

Example Flow

Login → Check In → Work → Submit Report → Admin Reviews → Comments → Check Out

6. Attendance & Leave Management

Applies to all users — Admin, Finance, every department's employees, and interns.

Attendance

- Check-In / Check-Out button on every user's personal dashboard.
- Automatic timestamp capture (optional IP/geo validation for remote staff).
- Auto-calculated Total Hours Worked per day.
- Automatic flags: Late Check-in, Early Check-out, Absent, Leave.

Admin Attendance Table & Filters

- Columns: Employee/Intern Name, Employee ID, Department, Date, In-Time, Out-Time, Total Hours, Status.

- Filters: Date, Department, Employee/Intern, Status.
- Views: Daily, Weekly, Monthly, Calendar.
- Drill-down: Admin → People & Attendance → select employee → view attendance history.

Leave Management

- Apply Leave: Leave Type, Start Date, End Date, Reason.
- Approval / Rejection workflow, leave balance, leave history.
- Employee Applies Leave → Manager/Admin Reviews → Approve / Reject.

7. Payroll System

Salary processing built on top of the attendance data, managed by Finance and reviewed by Admin.

Role	Responsibilities
Finance	Create salary structure: base salary, allowances, deductions, bonuses; leave/attendance deductions; net salary; payment status.
Employee	View payslip; download payslip PDF; view salary history.
Admin	Review payroll; approve payroll; view payroll reports.

8. Lead CRM & Pipeline

Lead details: Name, Phone, Email, Business Type, Service, Budget, Requirement, Source, Assigned Employee, Created Date.

Notes & follow-up scheduling.

Lead Pipeline: New → Contacted → In Progress → Proposal → Negotiation → Won/Lost

9. Automation Module

A dedicated automation module, not limited to CRM.

- Auto email replies
- Lead scoring
- WhatsApp notifications
- Follow-up reminders
- New enquiry notification
- Intern report reminder
- Attendance reminder
- Payroll notification

10. Content Management (CMS)

- Homepage: hero heading, hero description, CTA text, stats, solutions, why-Infotech, case studies, testimonials.
- Services: add / edit / delete.
- Blog: create, edit, delete, draft/publish, categories, featured image.
- Testimonials: add, edit, delete, video/image, client name, feedback.

11. Projects Module

Fields: Project name, Client, Service, Start date, Deadline, Assigned team, Status, Budget, Revenue, Progress %, Description, Files, Notes.

Statuses: Planning → In Progress → Review → Completed → Archived

12. Reports & Analytics

Graphs: Website visitors, Leads, Conversion rate, Revenue, Lead source, Campaign performance, Monthly growth, Employee attendance, Intern performance.

Time filters: Today · 7 Days · 30 Days · 3 Months · 1 Year · Custom

13. Notifications

Type	Events / Channels
Events	New lead · Lead assigned · New intern report · Admin comment · Leave request · Leave approval · Late attendance · Payroll processed · New career application
Channels	Dashboard notification · Email · WhatsApp (where applicable)

14. Security & Audit Logs

Security Requirements

- Password hashing
- JWT / session-based authentication
- Role-based authorization & permission checks
- Password reset flow
- Account deactivation
- Login activity tracking
- Session expiration
- API authentication
- Input validation
- File upload restrictions

Audit Log

Tracks: who changed something, what was changed, date/time, previous value, new value, module.

Example: "Admin changed employee salary from X to Y."

15. Settings & Role Management

- General settings (branding, company info)
- API configuration
- Email SMTP setup
- WhatsApp integration

- Role & permission management for every user type

PART D — API REQUIREMENTS

Backend endpoint groups required to support the admin dashboard, intern/employee portals, and public website integrations.

1. Authentication APIs

- Login
- Logout
- Refresh token
- Forgot password
- Reset password

2. Employee APIs

- Create employee
- Update employee
- Delete / deactivate
- Get employee

3. Attendance APIs

- Check-in
- Check-out
- Get attendance history

4. Internship APIs

- Submit report
- Get reports
- Add comment
- Review report

5. CRM APIs

- Create lead
- Assign lead
- Update status
- Add notes

6. Payroll APIs

- Calculate salary
- Generate payslip
- Update payment status

7. Extended API Response & Integration Standards

Extended implementation requirement.

All APIs should use consistent request/response conventions so frontend, backend, and future integrations remain predictable.

Area	Requirement
HTTP methods	Use GET for retrieval, POST for creation/actions, PUT/PATCH for updates, DELETE for removal/deactivation where appropriate.
Success response	Consistent JSON envelope containing success status, data/result, and optional message.
Error response	Consistent JSON envelope containing success=false, machine-readable error code, message, and validation details where applicable.
Validation	Validate required fields, formats, ranges, file types, and permissions on the server.
Pagination	List endpoints should support page/limit or equivalent pagination and return total/count metadata.
Search & filters	List endpoints should support search and relevant filters such as status, department, date range, and assigned user.
Sorting	Allow safe sorting by approved fields only.
Authentication	Protected endpoints require authenticated sessions/JWT and role/permission checks.
Audit	Sensitive mutations should create audit-log records.

8. API Error Handling Examples

Status	Use
200	Successful read/update/action
201	Successful creation
400	Invalid request / validation error
401	Unauthenticated or expired session
403	Authenticated but not permitted
404	Resource not found
409	Conflict / duplicate state
422	Unprocessable validation data, if adopted
500	Unexpected server error

PART E — DATABASE SCHEMA

Core and expanded table list covering HR, attendance, payroll, CRM, projects, CMS, notifications, and audit trails.

1. Core Tables

Table	Fields
users	id, name, email, password_hash, role, department, join_date, status
attendance	id, user_id, date, in_time, out_time, total_hours, status
daily_reports	id, user_id, date, tasks_completed, hours_spent, blockers, learnings, attachment_url, status
report_comments	id, report_id, admin_id, comment_text, created_at
payroll	id, user_id, month, base_pay, allowances, deductions, net_pay, payment_status
leads	id, name, phone, email, service, budget, status, assigned_to, created_at

2. Expanded Tables

Table	Fields
departments	id, name, description
roles	id, name, description
permissions	id, role_id, module, access_level
leave_requests	id, user_id, leave_type_id, start_date, end_date, reason, status, approved_by
leave_types	id, name, default_days
projects	id, name, client, service, start_date, deadline, status, budget, revenue, progress
project_members	id, project_id, user_id, role_in_project
notifications	id, user_id, type, message, is_read, created_at
audit_logs	id, user_id, module, action, previous_value, new_value, created_at
blog_posts	id, title, content, category, featured_image, status, published_at
services	id, name, description, icon
testimonials	id, client_name, feedback, media_url
case_studies	id, title, image, metrics, url
career_applications	id, applicant_name, role, resume_url, stage, applied_at
settings	id, key, value
lead_notes	id, lead_id, note, created_by, created_at
lead_followups	id, lead_id, followup_date, status, notes

3. Database Relationships / ER Guidance

Extended implementation requirement.

The final implementation should create an ER diagram from the following logical relationships. Foreign-key names may be adjusted to the selected database convention, but the relationships should remain traceable.

Parent	Child	Relationship
users	attendance	One user → many attendance records
users	daily_reports	One intern/user → many daily reports
daily_reports	report_comments	One report → many comments
users	report_comments	One admin → many report comments
users	payroll	One employee → many monthly payroll records
users	projects	Many users ↔ many projects through project_members
projects	project_members	One project → many assigned members
leads	lead_notes	One lead → many notes
leads	lead_followups	One lead → many follow-ups
users	notifications	One user → many notifications
users	audit_logs	One user → many audit events
roles	permissions	One role → many permissions
users	leave_requests	One user → many leave requests
leave_types	leave_requests	One leave type → many leave requests

4. Recommended Data Rules

- Use stable primary keys and indexed foreign keys.
- Index high-volume filters such as user_id, date, status, department, assigned_to, and created_at.
- Store timestamps consistently and define the application timezone policy.
- Keep payroll and audit records traceable; avoid destructive deletion of historical financial records.
- Use soft deactivation for users where historical attendance/payroll/report records must remain available.
- Define unique constraints for fields that must not duplicate, such as login email where applicable.

PART F — FIGMA WIREFRAME SPECIFICATION

Screen-by-screen layout guidance for the design team, covering the public website, the admin dashboard, reusable components, and responsive behavior.

1. Frame Setup (Figma)

Device	Width / Grid
Desktop	1440px — 12-column grid, 80px margin, 24px gutter
Tablet	768px — stacked grid
Mobile	375px — single column, hamburger nav
Spacing	8px base: 8 / 16 / 24 / 32 / 48 / 64

2. Homepage Wireframe

- Navbar: Height: 80px, sticky, glass/blur on scroll. [Logo] | [Menu] | [CTA].
- Hero: 100vh, 2 columns. Animated gradient background, floating elements, dashboard illustration, stats row.
- Trust Bar: Height: 100px. Auto-scrolling logo slider + "Trusted by..." text.
- Solutions: Centered title, 2x2 grid of 4 glass cards with hover glow, 24px gap.
- Why Choose Us: Split layout: bullet points (icon + text) left, illustration right.
- Case Studies: Horizontal scroll, 3 cards visible. Image, title, metrics, button, hover zoom.
- Interactive Tools: 3-card row: ROI Calculator, Website Audit, AI Chat — icon + title + CTA.
- Careers: Title/description/CTA left, illustration right. Below: internship cards.
- Testimonials: Slider layout. Card: profile image, name, feedback text.
- Enquiry Funnel (Modal): Centered modal: Service Selection, Form Inputs, Budget Slider, Submit.
- Blog: 3-column grid. Card: image, title, short text.
- Footer: 4 columns: Company, Services, Resources, Contact. Floating WhatsApp button.

3. Admin Dashboard Wireframe

- Login Screen: Centered glass card: Logo, Email, Password, Login button.
- Dashboard Home: Sidebar (250px): Dashboard, Leads, Projects, People/Attendance, Payroll, Careers, Settings. Main: 4 stat cards, revenue/leads graph, recent activity table.
- Leads Page: Table: Name, Phone, Service, Status, pipeline stage. Filters + search on top.
- People & Attendance Page: Attendance table with filters/views; tab for Intern Daily Reports + comment panel; Leave Management tab.
- Payroll Page: Employee salary table with base pay, deductions, net pay, payment status; payslip generation.
- Projects Page: Kanban-style board: Planning → In Progress → Review → Completed → Archived.
- CMS Page: Section selector, text editor, image upload, save button.
- Careers Page: Applicant list: name, role, resume download, hiring stage.
- Settings Page: Tabs: General, API, Email, Integrations, Roles & Permissions.

4. Components (Figma)

- Button (Primary / Secondary)
- Card (Service / Blog / Case Study, glass style)
- Navbar
- Footer
- Form Inputs
- Modal
- Sidebar
- Notification toast
- Status badge / chip

5. Design Tokens

Colors: Primary Navy #0B0F19 · Accent Blue #5B8CFF · Teal #00D1B2 · Secondary Text #A0AEC0

Typography: H1 48px · H2 36px · Body 16px · Inter / Satoshi

Radius: 12–16px · Shadows: soft/diffused · Motion: Framer Motion

6. Responsive Behavior

Breakpoint	Width
Desktop	1440px+
Tablet	768px+
Mobile	375px+

- Cards → collapse to one column.
- Tables → horizontal scroll / responsive stacking.
- Sidebar → collapsible.
- Navbar → hamburger.
- Charts → responsive resizing.
- Forms → full width.
- Sticky CTA on mobile.
- Touch-friendly button sizing.

PART G — EXTENDED IMPLEMENTATION REQUIREMENTS

This section contains the additional details added to v3 after reviewing the v2 blueprint. These items close remaining implementation gaps without changing the core v2 requirements.

1. Employee Profile & People Detail Screen

Extended implementation requirement.

The HR registry should have a dedicated employee/intern profile screen so Admin and authorized roles can view a complete person record without navigating across multiple modules.

Section	Fields / Functions
Personal	Name, photo, contact details, Employee/Intern ID
Employment	Role, department, designation, joining date, reporting manager, active/deactivated status
Documents	ID proof, contract, offer letter, other authorized documents
Attendance	Current status, attendance history, monthly summary
Leave	Balance, requests, approvals, history
Payroll	Salary history, payslips, payment status where permitted
Performance	Intern reports/feedback for interns; role-appropriate performance records for employees
Account	Login status, password reset action, deactivate/reactivate where permitted

2. Intern Performance Dashboard

Extended implementation requirement.

Provide a dedicated Admin/Manager view for monitoring internship progress over time.

- Daily reports submitted.
- Reports pending.
- Attendance percentage.
- Total working hours.
- Weekly performance rating.
- Admin comments and feedback history.
- Blockers/issues trend.
- Performance history by date range.
- Filter by intern and date range.

3. Career Application Workflow

Extended implementation requirement.

The Careers admin panel should manage applicants through a clear hiring-stage workflow.

Recommended stages: Applied → Screening → Interview → Selected → Rejected → Joined

- Applicant name, role, contact information, resume.

- Hiring stage.
- Interview date and notes.
- Assigned recruiter/manager.
- Internal comments.
- Stage-change history.
- Applicant communication action where integrated.
- Resume download subject to permission and secure file handling.

4. Document & File Management

Extended implementation requirement.

The platform handles employee documents, resumes, project files, and optional internship-report attachments. Define a consistent file policy.

Area	Requirement
Allowed formats	Define approved document/image formats per upload type.
File size	Define maximum file size per upload type in backend configuration.
Storage	Use secure storage with access controlled by role and record ownership.
Download	Only authorized users can download protected documents.
Delete	Use permission checks; retain required historical records where applicable.
Audit	Log sensitive upload/delete/download actions where required.
Resume access	Restrict applicant resume access to authorized recruitment/admin roles.

5. API Standards

Extended implementation requirement.

- Use consistent success and error response envelopes.
- Validate input on the server even when frontend validation exists.
- Protect every non-public endpoint with authentication and authorization.
- Use pagination for large list endpoints.
- Support search, filtering, and sorting where the UI requires it.
- Return clear validation errors that the frontend can display.
- Record audit events for sensitive mutations.
- Document authentication requirements and required roles for each endpoint.
- Define the application timezone and timestamp format consistently.

6. Database ER Diagram Deliverable

Extended implementation requirement.

Before backend completion, produce an ER diagram based on Part E. The diagram should show primary keys, foreign keys, cardinality, and the main relationships between HR, attendance, internship, payroll, CRM, projects, CMS, notifications, and audit records.

Minimum relationship groups:

- User ↔ Attendance

- User ↔ Daily Reports ↔ Report Comments
- User ↔ Payroll
- User ↔ Leave Requests ↔ Leave Types
- User ↔ Projects through Project Members
- Lead ↔ Notes / Follow-ups
- User ↔ Notifications
- User ↔ Audit Logs
- Role ↔ Permissions

7. Employee / Intern Daily Operating Rules

Extended implementation requirement.

- A user can have at most one active attendance session for a workday.
- Check-out should close the active attendance session and calculate total hours.
- A daily report belongs to a specific user and date.
- Intern reports can be edited or resubmitted according to an Admin-configured policy.
- Admin comments should remain associated with the report and show to the intern.
- Attendance and report history should remain available after a user is deactivated, subject to retention policy.

8. Public Website → Admin Integration

Extended implementation requirement.

Public website actions should create and update the appropriate internal records through authenticated backend APIs.

- Website enquiry → Lead CRM.
- Career application → Career Applications.
- Internship application → appropriate applicant/intern onboarding flow.
- Blog/service/testimonial CMS updates → public website.
- Analytics integrations → Reports & Analytics.
- AI/automation tools → configured API integrations and lead capture where enabled.

PART H — IMPLEMENTATION CHECKLIST & HANDOFF

1. Functional Completion Checklist

- Public homepage and all 12 website sections
- Responsive website for desktop, tablet, and mobile
- Design system and reusable UI components
- Role-based authentication
- Admin dashboard
- Employee and intern HR registry
- Employee/intern profile screen
- Intern dedicated login
- Intern check-in / check-out
- Intern daily report submission
- Admin report review and comments
- Intern performance dashboard
- All-user attendance tracking
- Leave management
- Payroll processing and payslip generation
- Lead CRM and pipeline
- CRM notes and follow-ups
- Automation module
- CMS
- Projects and Kanban workflow
- Analytics and reports
- Notifications
- Career application workflow
- Secure document/file management
- Security controls and audit logs
- API groups and API response standards
- Database schema and ER diagram
- Figma wireframes and clickable prototype

2. Recommended Development Order

Phase	Work
1	Figma design system + homepage + component library
2	Public website pages and responsive behavior
3	Authentication + roles + permissions
4	HR + employee/intern profiles
5	Attendance + leave
6	Intern dashboard + daily reports + Admin feedback
7	Payroll
8	CRM + automation
9	CMS + Careers
10	Projects + Analytics + Notifications
11	Security + audit + file management
12	API hardening + database ER diagram + testing
13	Production deployment + monitoring + handoff

3. Testing & Acceptance

- Test every role against the permission matrix.
- Verify an intern cannot access Admin/Finance-only data.
- Verify Finance can access payroll according to the matrix.
- Verify attendance totals and late/early rules.
- Verify an Admin comment becomes visible to the correct intern.
- Verify payroll calculations against attendance/leave inputs.
- Verify lead pipeline transitions and assignment permissions.
- Verify protected files cannot be accessed by unauthorized roles.
- Verify audit records for sensitive changes.
- Verify API validation, authentication, authorization, pagination, and error handling.
- Test responsive layouts at the defined breakpoints.
- Run performance, accessibility, SEO, and security checks before production.

4. Final Handoff Flow

Homepage in Figma → Convert to Components → Design Inner Pages → Clickable Prototype → Frontend Implementation → API Integration → Database Integration → Testing → Production Handoff

The final product should be clean, minimal, conversion-focused, responsive, secure, and scalable. Think: SaaS dashboard + premium digital agency hybrid. NOT an old corporate website. Infotech should look like a product, not just a company.

END OF INFOTECH COMPLETE PLATFORM BLUEPRINT v3
